HI-TECH A board 1,841 x 594 mm.

An anti-plexiglass frame with steel fasteners is a very modern form of presentation of a poster or printout.

Application: facade - poster printing / photo presentation, etc.

Two layers of acrylic glass 4 mm x 2 = 8 mm + 4 steel spacers (STAINLESS STEEL) with dowels and screws.

We emphasize that our spacers are made of acid-resistant steel (not made of plastic, corian, metal / shell, etc.)

Easy and quick assembly:

Using a spirit level, mark two points with a marker pen through the holes cut in the plate - drill the holes - insert the
pegs - screw it on

the bottom of the distances to the facade - put a sheet of paper between two layers of acrylic glass - put the spacer
heads - twist the spacer heads to the right.
