HPL, HDF and Alucobond panels are installed on external and internal facades.

These are wood-based materials available in many colors.

You can print on them directly using digital printing.

HPL board is a duroplastic laminate. The HPL board for the inside is a perfect complement to interior design designed by architects and in the furniture industry.

HPL boards consist of many layers of paper bonded with resin by means of pressure pressing with specialized machines.

HPL boards are installed in various types of office and sports facilities, stations, airports, banks and companies.

The price of the installation of HPL boards is individually priced based on the submitted project.

HPL laminate is a layered thermosetting material, made of several or several layers of paper impregnated with phenolic resin, pressed under high pressure (7-9 MPa) and temperature (approx. 150 ° C) and decorative paper impregnated with melamine resin, with the possibility of covering a layer that protects against the influence of weather conditions.

Available dimensions of Fundermax HPL boards:

2140 x 1060 mm

2800 x 1300 mm

4100 x 1300 mm

HPL board thicknesses

4 mm hpl plate, 6 mm hpl plate, 8 mm hpl plate, 10 mm hpl plate, 12 mm hpl plate, 13 mm hpl plate, 15 mm hpl plate

The 8mm thick board is the most used board.

When arranging the boards, we use ca gaps. 8mm from one plate to the other.

HPL panels can be installed on your own.
