Plexiglass panels on system distances.

Graphics on the panel included.

Panel dimensions: 500 x 150 mm

The brushed steel spacers have a catch system, where there is no need to cut out holes in plexiglass.

The panels can be mounted directly to the facade, on a plexiglass plate or on a free-standing structure with a transparent plexiglass plate, outside the building.

Quick and easy panel replacement.

We also recommend door plates in this system.
